

Delay Repay Automation for Train Operating Companies

The challenge

There are 1.7 billion passenger train journeys in the UK annually, and Train Operating Companies must provide Delay Repay compensation for delays of 15 minutes or more. Each claim requires journey verification, fraud checks, and must comply with Office of Rail and Road (ORR) standards. Historically, processes have been manual and inconsistent across TOCs, with limited automation or fraud detection.

8.3M

claims processed annually (2024–25)

£150M

compensation paid annually

99.1%

of claims processed within 20 working days (industry standard)

81.6%

claim approval rate across all TOCs

Automating Delay Repay with our Rail Case Management app

Our Rail Case Management app, built on ServiceNow, automates the end-to-end Delay Repay process - from claim submission to payment - reducing cost, risk, and effort while improving passenger satisfaction and compliance. The application also automates wider customer service processes, such as compliments, complaints, lost property, and feedback management.

Train Operating Companies using the app have achieved:

70–80% automation of Delay Repay claims of all ticket types

24–48-hour average payout times for eligible customers

Consistent ORR compliance across all claim types

Improved customer experience through proactive engagement and faster resolution

The result

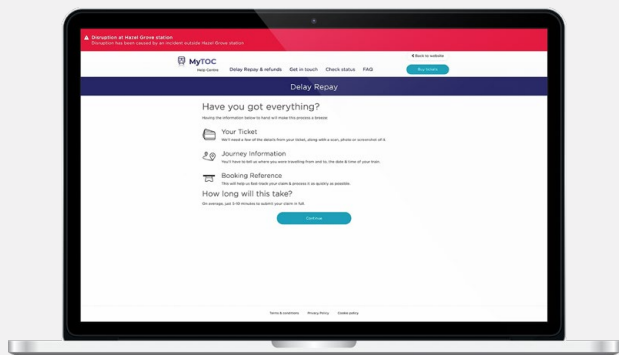

“Once we’d set-up UP3’s Delay Repay Case Management App alongside the Rail Fraud App, designed and developed around our specific requirements, we were able to **automate 70% of compensation claims** without them ever even needing to touch a human being.”

- David Banham, Customer Relations Operations Manager

Key features

> Unified digital claim form

Built directly in ServiceNow, customers submit claims seamlessly, ensuring an improved user experience and all correspondence in one system.

> Proactive “one-click” claims

Automatically notifies customers when a journey is delayed and pre-populates their claim, improving customer service, fairness and trust.

> Omnichannel engagement

Empowers customers to self-serve while providing quick access to live support for more complex queries. Integrates with your customer portal, supports webchat and with appropriate licensing, social media - allowing customers to engage via their preferred channel.

> Secure payments

Automated bank and PayPal payments directly from the platform using secure integrations, eliminating manual agent processing.

> Fraud detection

Connects with UP3's existing fraud app, built on ServiceNow, to identify impossible or duplicate journeys, ensuring only legitimate claims are processed.

[Learn more >](#)

> Automated validation

Integrates with ticketing systems, smartcards (The Key), and Darwin (the national real-time train data source) to automatically validate journeys and confirm eligibility.

> Case management & QA

Provides workflows for complex cases (such as upgrades, taxi reimbursements, or complaints) with SLA tracking, categorisation, and quality assurance checks.
